● South Carolina
● Laurens County

The Data

County and state data represent uninsured adults ages 18-64 with a new diagnosis of opioid use disorder who met selected cascade targets. To count as a "new" diagnosis, the person could not have had any opioid use disorder diagnosis or treatment in the two months before, giving us a fresh window to see whether treatment happened. Detailed information regarding the study population and the methods used to create these estimates, as well as additional data, can be found on our [website](https://www.addictioncenterofexcellence.sc.gov/data).
